■ **BUILT FOR MODERN ACCESS CONTROL**

AccessConnect brings access control and video together into a unified operational view. Operators can see doors, credentials, and video context in the same workflow and on visual maps, improving response time and reducing investigative friction.

■ **DESIGNED AROUND OPEN SECURITY PLATFORMS**

By leveraging open architecture systems like LenelS2, Milestone, and Axis, AccessConnect allows organizations to build flexible access control environments that integrate naturally with video, analytics, and other security technologies.

■ **SIMPLIFYING IDENTITY AND CREDENTIAL MANAGEMENT**

AccessConnect helps streamline how credentials, identities, and permissions move through the security ecosystem. From badge reads to alarm events, the system keeps identity data synchronized and visible where it matters most.

■ **FASTER INVESTIGATIONS WITH VIDEO CONTEXT**

When an access event occurs, AccessConnect links door activity with recorded video, allowing operators to verify events instantly. Security teams can quickly confirm who accessed a door and what happened before and after the event.
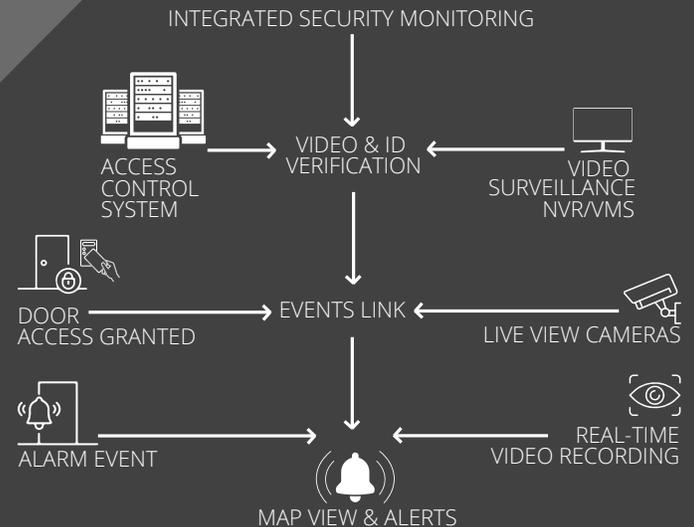

■ **SCALABLE FOR ENTERPRISE ENVIRONMENTS**

Whether protecting a single facility or managing thousands of doors across multiple sites, AccessConnect is designed to grow with the organization while maintaining consistent security workflows.

INTEGRATED SECURITY MONITORING

ACCESS CONTROL SYSTEM → VIDEO & ID VERIFICATION ← VIDEO SURVEILLANCE NVR/VMS

DOOR ACCESS GRANTED → EVENTS LINK ← LIVE VIEW CAMERAS

ALARM EVENT → MAP VIEW & ALERTS ← REAL-TIME VIDEO RECORDING

WHY ACCESS**CONNECT?**

Better visibility. Faster investigations.
Access control designed to work seamlessly with video.
