■ BUILT TO ELIMINATE DUPLICATE DATA ENTRY

HRConnect synchronizes employee information between HR systems and access control platforms, eliminating the need to manage identities in multiple places. Changes made in HR automatically flow into the security system.

■ REDUCING ADMINSTRATIVE OVERHEAD

Security administrators no longer need to manually create or modify access control records. HRConnect automates these processes so teams can focus on managing security rather than managing data.

■ ALIGNING SECURITY WITH THE EMPLOYEE LIFECYCLE

From hiring to role changes to termination, HRConnect ensures access privileges follow the employee lifecycle. This helps organizations maintain security while reducing manual administrative work.

■ DESIGNED FOR SECURE ENTERPRISE INTEGRATION

HRConnect is built to integrate with enterprise HR systems while maintaining strong security controls and data governance.

■ IMPROVING ACCURACY ACROSS SYSTEMS

Manual entry creates errors. HRConnect keeps identity data consistent across systems by automating updates, ensuring badge records, credentials, and user profiles remain accurate.
