### CRITICAL EVENTS SHOULD NEVER GO UNNOTICED

Security teams cannot realistically watch hundreds of cameras or constantly monitor alarm screens. LMRConnect ensures that the moments that matter most don't rely on someone noticing them. When important events occur, the system makes sure they demand attention.

### TURNING SECURITY SYSTEMS INTO ACTIVE ALERTS

Instead of waiting for operators to discover a problem, LMRConnect allows cameras, access control systems, and analytics to automatically trigger alerts. These alerts are immediately delivered over trusted radio networks to the people responsible for responding.

### BRINGING SITUATIONAL AWARENESS TO THE FIELD

Security personnel carrying radios receive clear, audible notifications when incidents occur. Rather than relying on a control room to relay information, responders hear the alert instantly and can move directly to the location where help is needed.
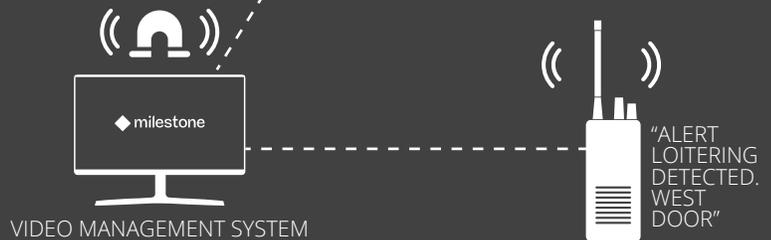

### AUTOMATING THE SECURITY WORKFLOW

Modern security environments generate enormous amounts of information. LMRConnect helps organizations filter that noise by automating which events should trigger attention, ensuring the most important situations are communicated immediately.

### BUILT ON MISSION-CRITICAL COMMUNICATION NETWORKS

By integrating with Motorola land mobile radio systems, LMRConnect delivers alerts across the same reliable infrastructure used for mission-critical communications, ensuring that critical information reaches responders when it matters most.
